# SeaGuardian

## Product description

This is a one component antifouling coating based on ion exchange technology. The fouling protection is achieved through self polishing characteristics reducing hull deterioration. Suitable for higher speed vessels.

## Typical use

Recommended for new applications as well as maintenance. Designed for both motor cruisers and sailing vessels in a wide range of speeds with medium - high activity. The product may be suitable for use for long service periods up to 36 months as a part of a complete coating system. Suitable on approved primers and tie coats on FIBREGLASS, TIMBER or STEEL.

Colours above are indicative only.

NOTE\* Antifouling performance will be influenced  
by environmental conditions,  
application standards and activity levels.

## Testimonial

“ no antifoul stays on the market this long without tremendous success over a long period of time, economical, proven long lasting... ”
