# SeaSafe Ultra

Combating of fouling on Aluminium vessels is a constant battle often in the warmer and more nutrient rich environments of our North. SEASAFE ULTRA gives the best possible protection for your vessel in these challenging conditions and its record is second to none. Selected as the No 1 choice by some of the largest Aluminium fleets in Australia, SEASAFE ULTRA has a proven track record over a long period of time...

Shouldn't you be using SEASAFE ULTRA?

## Product description

This is a one component acrylic, hydrolysing antifouling coating based on ion exchange technology. It provides very good fouling protection. This is achieved through self polishing characteristics reducing hull deterioration. Suitable on approved primers and tie coats on aluminium, carbon steel and timber substrates.

## Typical use

Recommended for use on Aluminium vessels for new building or dry docking. Specially designed for vessels trading through a range of speeds and activities.

## Testimonial

“ We wanted to make sure that when this vessel left our yard our customer had a high quality finish above and below the waterline. That's why we chose Jotun ”
